Guide To Succulents Of Southern Africa

Synopsis

Twenty-five per cent of southern African flora is succulent in nature, and a remarkable forty per cent of the world's succulent plants occur in South Africa. The book will highlight the diversity of succulents that occur in the region with special emphasis on the larger groups Åçâ ¬â œmesems (vygies) and aloes. The book covers approximately 250 individual species, focusing on the most common and most interesting, and each entry features a photograph and distribution map.

Customer Reviews

GIDEON SMITH is Chief Director: Biosystematics Research and Biodiversity Collections at the SA National Biodiversity Institute. He is involved in various national and international environmental associations and advisory committees. His interests are in the biology and classification of succulent plants, as well as landscaping and horticulture. South AfricaÅçâ ¬âœs most prolific author on succulent plants, he has authored or co-authored Å 40 books, and more than 500 research and popular papers, mostly on succulents.

This book has some plants that are not in most older books and make it worth the cost to have even though it does not cost a lot. I would recommend this book to others and it has a great price for it like other succulent books

The book is good but the layout of the ebook causes the picture and the text to be on different

pages

Nice and informative book!

Good book.

A very useful guide to growing and caring for Succulents of South Africa. I use it daily at my job.

This is an excellent, informative book for those who enjoy growing succulents in their gardens. Great to see how many popular plants actually appear in the wild. A keen gardener could then seek to replicate this growing style.

The book coveres a lot of plants, and many specimens in every main group, this is good. The information is very brief. There is not enough information on climate where the plants grow and rain patteren. The book format is too small and so are the pictures.
